STRETCH FABRIC CEILING

STRETCH YOUR
IMAGINATION
TO LIGHT YOUR
CEILINGS

Uniser Stretch Ceiling:

A **Stretch Fabric Ceiling** is a suspended ceiling system and it is made of Perimeter Track - Aluminium or Plastic PVC & Membrane - with a PVC or Nylon material made to various size/shape from rolls.

Stretch Fabric Ceiling is an excellent material because it can be installed quickly and without removing the furniture out of the room.

Our **Stretch Fabric Ceiling** is selected keeping in mind the other interior design materials used at your space, whilst also keeping the installation methods and maintenance as one of the most important aspects to provide a hassle-free solution.

Types of Products

Translucent

Backlit stretch fabric ceiling is the most attractive finish with outstanding results. When you turn on your switch, the translucent back-light stretch ceiling is able to illuminate the entire ceiling in its installed shape & size.

Printed

The choices are infinite (photos/geometric patterns). Any digital image you choose can be enhanced.

Lacquer

The main feature of lacquer finish is to reflect direct and indirect light. This makes the space feel wider and brighter, with perceived increase in volumes and heights enhancing the look & feel of the space.

SITE SURVEY

01

Physical or Digital (auto-cad) Survey of Space for Measurement & Feasibility

INSTALLATION & EXECUTION

03

Site co-ordination and deployment of stretch fabric ceiling solution
